

[PART 12]

[Warning: This work constitutes an historic review of a brutal murder! Readers are advised that certain portions of this work may be disturbing to some individuals. If an individual is easily disturbed by this report they are advised to limit their viewing experience.]

The Neck Wound

The actual neck wound medical evidence indicating a second gunman needed to be attacked if the “lone gunman” myth was to be continued and the real government assassins protected.

From Dr. Allen Childs, and his book, *We Were There: Revelations from the Dallas Doctors Who Attended to JFK on November 22, 1963*, we learn, “The doctors [Kemp Clark, Charles Crenshaw, Robert McClelland and Malcom Perry] at Parkland [Hospital] were the only ones who saw the neck wound before the emergency tracheotomy, and **they were unanimous that the neck wound was an entry wound.**”

“They were unanimous that the neck wound was an entry.”

A

B

A - Photograph of President Kennedy at Love Field on November 22 shows how high his tie is worn. Secret Service agent Clint Hill is right behind the President.

B - President Kennedy is shot the first time in the neck from the front. Governor Connally does not react and has not yet been hit by gunfire. This was the first of three bullets that hit the President.

When Dr. Robert Nelson McClelland attended Kennedy at Parkland Hospital he reported on the neck wound and said, **“It certainly did look like an entrance wound. This did appear to be an entrance wound.”**

President Kennedy's shirt he wore on November 22, 1963.

U.S. Senate Investigator Harold Weisberg reported, "This is an actual FBI print, not from the Warren Commission's files. It has this caption typed on the back: '*Photograph depicting portion of Exhibit 60.*' In itself this picture, presented here for the first time anywhere [in his report], destroys the entire Warren Report and means the falsity could not have been accidental. **It shows no bullet holes but slits. It also shows that when the shirt is buttoned they do not coincide and on this added basis could not have been made by a bullet.** Note that the slit on the button side is entirely below the neckband while that on the buttonhole side extends well up onto it."

"The FBI and the Commission both knew their representations were false. The Commission blundered into the truth separately when Dulles asked Dr. Carrico where the President's **front neck wound was** and Carrico told him **it was above the shirt.** Carrico confirmed this to me when he also confirmed the obvious, that this damage to the shirt was done when the necktie was cut off under his supervision during emergency treatment [not by a bullet]."

"...as the doctor's in Dallas reported and as, **until it was altered, the autopsy report still said two days after the assassination the President's neck wound was from the front.** The government says all the shots were from the back. The change of the autopsy was made after Oswald was arrested – after he was murdered and no cross-examination was likely." It was also changed when authorities discovered that the assassination had been captured on film. Is it even possible that the doctors could have gotten a front gunshot wound incorrectly in THE most critical case of their careers?

On the day of the assassination, before the cover-up began in earnest; Dan Rather reported on T.V., "We are told that the gunshot wound, the fatal wound inflicted on the President of the United States entered at the base of the throat and came out at the base of the neck on the backside." Only later would he become a visible part of attempts to paint a false picture to the American people about this murder.

Parkland Hospital medical drawing of Kennedy's neck wound.

Testimony of Mark Lane at Warren Commission, March 4, 1964

“On the 27th of November, the *New York Times* reported, ‘Dr. Kemp Clark, who pronounced Mr. Kennedy dead, said one bullet struck him at about the necktie knot, **‘It ranged downward in his chest and did not exit’** the surgeon said.’ On the same day the *New York Herald Tribune* stated, **‘On the basis of accumulated data, investigators have concluded that the first shot fired as the Presidential car was approaching, struck the President in the neck, just above the knot of his necktie then ranged downward into his body.’** According to Richard Dudman – Mr. Dudman is the Washington correspondent, as I am sure you all know better than I, for the St. Louis *Post-Dispatch* –according to him, the surgeons who attended the President while he was at the Parkland Memorial Hospital, described the wound – **were in agreement in describing the wound in the throat as an entrance wound.** The St. Louis *Post-Dispatch* on December 1 carried a rather long and involved story by Mr. Dudman, recounting his conversations with the physicians who were treating the President on the 22d at the Parkland Memorial Hospital. Dr. [Malcolm] Perry (1929-2009) explained that he began to open an air passage in the President’s throat in an effort to restore his breathing, and he explained that the incision had been made through the bullet wound in the President’s throat – since that was in the correct place for the operation, in any event. **Dr. Perry, according to Mr. Dudman, described to him the bullet hole as an entrance wound.** Dr. Robert N. McClelland, who was one of the three physicians who participated in that operation, later stated to Mr. Dudman, **‘It certainly did look like an entrance wound.’** He went on to say that he saw bullet wounds every day in Dallas, sometimes several times a day, and that this did appear to be an entrance wound.”

“It ranged downward in his chest and did not exit.”

Conclusions:

1. *Medical evidence and doctor's testimony proves that President Kennedy received a neck wound fired from the front.*
2. *The Warren Commission ignored or covered-up proof of President Kennedy's wounds indicated on his clothing in order to produce a fraudulent report to the American people of a shot fired from behind.*

The Back Wound

The actual back wound medical evidence indicating a second gunman needed to be attacked if the "lone gunman" myth was to be continued and the real government assassins protected.

A

B

A - Image shows Kennedy holding his throat from first bullet shot from the front, and puffed-up cheeks from second bullet shot in the back and lungs from behind.

B - Drawing depicting the back wound of President Kennedy reportedly drawn from an autopsy photograph. However, the **medical evidence** clearly indicates the wound to the back was several inches lower **"below the shoulder blade and 2 inches further to the right"**. This drawing is false evidence in an

active and as yet unsolved murder case. The individual who drew this 'false document' had committed a felony, helping to cover-up the murder of President Kennedy.

U.S. Senate Investigator Harold Weisberg wrote, "This is FBI Exhibit 60, which the [Warren] Commission did not dare print because it contains evidence destructive of its conclusions and its and the FBI's integrity. The [photo] enlargement of the bullet hole in the back of the shirt was printed by the FBI upside down. **The actual hole coincides exactly with the real location of this wound, which was lied about. The FBI even twisted the tie to make it appear that there was a hole in the center. Actually, this small nick was made with a scalpel and was on the very edge of the knot.** It was enlarged with removal of a sample for scientific testing." In other words the FBI created fake evidence in a murder case to help frame Lee Harvey Oswald. This was at a time in recent American history when a majority of the public felt they could trust the FBI. Time and evidence exposed in this, and other high profile cases, proves that in fact the FBI could not be trusted to inform the American people. Fake news from the FBI may well have begun in earnest during the cover-up of the Kennedy assassination.

"With no hole in the parts of the garments coinciding with the location said to be that of the back wound and with coinciding holes considerably below that point, one might not have expected such a panel to dignify probative, material, tangible evidence of this character; it is that destructive of the case the [Commission] built. One cannot believe the panel ignored this mute pointing finger because it was confident the evidence was without significant. Nor can it be because the collateral evidence argues with the silence of the clothing. Three Secret Service agents gave testimony consistent with it. Two of them were present at the autopsy. **A fourth saw the impact of the bullet in the back four inches below the neck.** This evidence is in what was before the panel, in the Commission's volumes. **Two FBI agents said essentially the same thing in a suppressed report the Commission did not publish.** It was available to the panel. The panel preferred not to have it. It had enough trouble with what it could not avoid."

"**The tests were suppressed because they proved no bullet hit the tie or shirt front!** This combination of suppressed pictures alone proves that the President was not hit in the back of the neck, but in the back and that the bullet hole in the front of his neck was above the shirt. **Either is total disproof of the entire [lone gunman] "solution".**

The evidence also included the fact that the back wound was probed which proved that the bullet did not exit the President's body and therefore could not have wounded Governor Connally. FBI agents Frances X. O'Neill and James W. Sibert wrote, "This opening was probed by Dr. Humes with the finger, at which time it was determined that the trajectory of the missile entering at this point had entered at a downward position of 45 to 60 degrees. **Further probing determined that the distance travelled by this missile was a short distance inasmuch as the end of the opening could be felt with the finger.**" In the real world this evidence would be end-capped with the words "case closed!"

If the Kennedy grave is ever opened and a **real autopsy** is ever conducted this bullet which entered his back could be removed and once and for all time fully discount the lone gunman theory – but that truth must wait for a future generation to DEMAND. Eventually that demand will come from the American people – eventually.

“Further probing determined that the distance travelled by this missile was a short distance inasmuch as the end of the opening could be felt with the finger.”

FBI Report – January 23, 1964

“The President's clothing by the FBI laboratory disclosed that there was a small hole in the back of his coat and shirt approximately six inches below the top of the collar and two inches to the right of the middle seam of the coat. There were minute traces of copper on the fabric surrounding the hole. **Medical examination of the President's body had revealed that the bullet which entered his back had penetrated to a distance of less than a finger length.**”

During a closed door **top-secret session** of the Warren Commission, General Counsel J. Lee Rankin (1907-1996) questioned the single bullet theory and the fraudulent autopsy. “We have an explanation there in the autopsy that probably a fragment came out the front of the neck, but with the elevation the shot must have come from, and the angle, it seems quite apparent now, since we have the picture of where the bullet entered in the back, **that the bullet entered below the shoulder blade to the right of the back bone which is below the place where the picture shows the bullet came out in the neckband of the shirt in front**, and the bullet, according to the autopsy didn't strike any bone at all, that particular bullet, and go through.” It was quite clear that the single bullet myth was a fabrication, but they used it at any rate to lie to the American people. In short, the members of the Warren Commission were cowards at a critical point in American history when truth and courage were called for, but were sadly absent.

Testimony of Mark Lane at Warren Commission, March 4, 1964

“One doctor made reference to the frothing of blood in the neck wound. The doctor said, ‘He is bubbling air.’ Two of the doctors, Drs. Peters and Baxter, inserted a tube into the right upper part of the President's chest, just below the shoulder, to re-expand the lungs, and to keep them from collapsing. Dr. Jones and Dr. Perry inserted a similar tube on the left portion of the President's chest. The activity was necessitated because **the bubbling air was the first clue that they had that the President's lung had been punctured.** The prosecuting authorities, confronted with what seemed then to be evidence that the President had been shot from the front, in the throat...” (This

was medical proof that President Kennedy was in fact hit in the back and the bullet entered his lung and did not exit the body.)

The president's shirt, tie and jacket, all blood stained are held in storage in the National Archives in College Park, Maryland. Access to these public owned items, linked to an as yet unsolved murder are allowed to be under the control of a member of the Kennedy family. The general public or researchers need not apply.

Conclusions:

- 1. The Warren Commission ignored or covered-up proof of President Kennedy's wounds indicated on his clothing and body and produced intentionally incorrect drawings in order to produce a fraudulent report to the American people.*
- 2. The FBI is still covering up not only the truth of the back wound but their involvement in the cover-up.*

The Head Wound

"The wound was in the back part of the head!"
Dr. Robert N. Mc Clelland, Parkland Hospital

The actual head wound medical evidence indicating a second gunman needed to be attacked if the "lone gunman" myth was to be continued and the real government assassins protected.

Johnson's first action as 'president' was to hold the release of President Kennedy's death until he was out of Dallas. Newly advanced Lyndon Johnson told White House Acting Press Secretary Malcolm Kilduff, "I think I had better get out of here... before you announce it. We don't know whether this is a worldwide conspiracy; whether they are after me as they were President Kennedy..."

History asks: Was this true concern or part of a cover story by an individual who had knowledge of the murders in advance? Reader's choice on this one, but there was that meeting in Dallas on the evening of November 21, 1963 with several powerful men including John J. McCloy. At the meeting John J. McCloy is quoted as stating, **"After tomorrow we won't have to worry about the Kennedy's anymore."** **"After tomorrow, those goddamn Kennedys will never embarrass me again. That's no threat. That's a promise."**

White House Acting Press Secretary Malcolm Kilduff

White House Acting Press Secretary Malcolm Kilduff is pointing to exactly where the fatal bullet hit Kennedy in the head; fired from the front. This is exactly what the photographic evidence **clearly proves**; not just shows or indicates, **proves** where the President was hit! "He died from a gunshot wound in the brain; from a bullet right through the head." This statement was made before

any cover-up could be put in place and amounts to first hand reporting of the assassination facts at Parkland hospital. Malcolm Kilduff, it would appear, was not part of the conspiracy to murder President Kennedy.

Rear Admiral Dr. George G. Burkley, Kennedy's personal doctor signed the death certificate. During a 1975 interview Dr. Burkley stated that, **"Yes, there was a conspiracy."** Understanding that his life could very well be in danger he later stated that he would no longer talk about it. He said, **"Forget I said anything."**

The evidence of White House Acting Press Secretary Malcolm Kilduff, and Dr. Burkley's statements and the film of the assassination constitute testimony that one lone gunman could not have killed Kennedy shooting from behind. The shot was fired from a low position to right front of the vehicle **twisting his head to the left and slamming Kennedy back and to the left!**

Dr. Robert McClelland, who attended Kennedy at Parkland Hospital would later state, "The wound was in the back part of the head." He indicated that the gaping wound was about the size of a fist! Clear photographic evidence PROVES that his statement was a lie!

Clearly there is no visible damage to the back of Kennedy's head as shown in the enhanced close-up Zapruder film image. There is no visible exit wound and no spray of blood or brain matter from an exit wound on the back of his head which would have been clearly seen if the bullet had excited the skull! It was later understood that the high velocity bullet fragmented inside the skull. **Jim Garrison would later report that "John Kennedy was obviously shot from the front. Everybody knows it."**

"John Kennedy was obviously shot from the front. Everybody knows it."

Back and to the left! Back and to the left!

A - Frame clearly shows Kennedy holding his throat from first bullet shot from the front and puffed-up cheeks from second bullet shot in the back and lungs.

***Note:** Extreme enhanced close-up stop action between frame A and B above shows a streak coming towards President Kennedy from the front! That is the kill shot coming in!*

B - Frame 313 of the Zapruder film. Clear image of kill shot taken from the front with no possibility of coming

from behind. The back of Kennedy's head is not exposed from the front.

C - This frame 316 clearly shows there is no damage and no exit or entry wound to the back of Kennedy's head.

All the damage is done to the front right of his head with the bullet shattering within the brain.

D - Kennedy is violently thrown back and to the left! **Back and to the left!** Additionally, when compared to the fake color autopsy photo they do not match the damage done by the shot to the head.

An extreme closeup of President Kennedy's head wound shows no damage to the back of his head, including no exit wound. **Any exit wound would have displayed some type of material which would have been caught on film.** In point of fact the bullet which struck the President was a high velocity round which fragmented upon impact and left particles of the bullet in his brain as well as particles scattered around the vehicle. The reason his brain was later removed from custody and most likely destroyed was to prevent anyone from finding bullet fragments in the brain which in and of itself would have been one more piece of material evidence that President Kennedy was not killed by a "lone gunman" or a "magic bullet". When this image is compared to the autopsy images of President Kennedy's head it becomes clear that the autopsy photos have been doctored and are in fact part of the cover-up of his murder.

Jim Garrison would later comment that, "After he is shot in the head, the critical shot, John Kennedy goes backwards towards the back of the car so he's almost blown out the back of the car." At this point President Kennedy was brain dead! There would be no chance to save his life no matter what medical aid he was given.

Dr. James Carrico reported, "When we looked at him, he had... we saw this wound in the side of his head [holding the right side of his head], a great big wound. The president was lying on his back... I could see the whole wound in his head. And that's important, because it really doesn't fit perfectly with what we wrote down later... You know a big chunk of bone and scalp missing, and the fact that you could see all of it from the front meant that it involved the parietal bone which is this big skull bone and the temporal bone which is this big skull bone."

Motor officer Billy Hargis (seen in these images) riding to the left rear of the presidential vehicle; the closest officer to the President, was splattered with blood and brain tissue as it was blasted back towards him from the impact of the bullet.

DATA POINT: Sherry Gutierrez, a certified crime scene and bloodstain pattern analyst, concluded that "the [fatal] head injury to President Kennedy was the result of a single gunshot fired

from the right front of the President.” Researcher Paul Chambers believes that the fatal headshot is consistent with a high velocity (approx. 1,200 m/s; 4,000 ft/sec) rifle rather than the medium-velocity (600 m/s; 2,000 ft/sec) Mannlicher-Carcano.

On April 10, 1967 Dr. David Stewart was interviewed by Joe Dolan of KNEW, Oakland, California. Dr. Stewart had worked at Parkland Hospital on Oswald and Connally as “primarily my time was spent with Governor Connally and later with Lee Oswald.” “This [shot from the front] was the finding of all the physicians who were in attendance. **There was a small hole in the left front of the President’s head and there was a quite massive wound of exit at the right backside of the head and it was felt by all of the physicians at the time to be a wound of entry which went in the front.** And this was later corroborated, I think, by the films which showed the President with a rather violent lurch backward. And there was blood and brain substance found on one of the policemen riding behind on a motorcycle.”

Dr. Riyad Tama reported, “Apparently the bullet had exploded in his brain, his heart beat was very slow, and there was no way we could resuscitate him, he may have already been dead when they brought him in.” Needless to say, if the bullet “exploded in his brain” it could not have magically become a “magic bullet” in later fairy tales told by the Warren Commission.

Dr. Charles Baxter would recall, “We had an opportunity to look at his head wound then and saw that the damage was beyond hope, that is, in a word – literally the right side of his head had been blown off.”

Conspiracy, ignorance, or just fake news?

In the Warren Commission report the Zapruder movie frames number 312 and 313 were intentionally printed out of order with 313 first then 312 after, to falsely indicate that the president’s head went forward instead of how it actually went backwards. The only word for that is cover-up!

THEY LIED to the American people!

Note that as Kennedy is thrown back and to the left and Connally is being pulled down by his wife, Secret Service Agent Roy Kellerman does not even look back to see what is happening behind him!

Dan Rather working for CBS

Three days after the assassination on November 25, 1963 Dan Rather working for CBS went on national television and reported, "I've just seen the film of the assassination of President Kennedy. A second shot that; a third total shot hit the president's head; his head could be seen to move violently forward." Rather demonstrated the false movement by his head moving forward.

Supporters and others may state that he simply "misled the public" about what he saw. This is not true. **He LIED about three shots and he lied about the movement of the President's head!** These lies would hold for a decade until the film could be viewed by the American people. This would not be the last time Dan Rather would "misled the public". He was eventually fired for knowingly reporting false stories about President George W. Bush. Clearly, based solely upon his proven actions, Dan Rather cannot be trusted to inform the American people on any news report, including the assassination of President Kennedy. Rather also went on the radio to report, "The second shot, the third shot total, hit President Kennedy. And there was no doubt there. His head went forward with considerable violence. No doubt there." Another lie from Dan Rather! But be of good cheer, for soon after being removed from his 'reporting' job Rather was given an award for his excellent work in the media by his fellow 'reporters'!

Since World War II and the OSS, the CBS 'news' organization and leadership had long been known to have close ties to intelligence organizations and eventually the Central Intelligence Agency.

Question: Can Dan Rather or any CBS leadership be tried and convicted for conspiracy after-the-fact to cover-up this murder?

The national Press, led by CBS went along with the cover-up and the myth of the lone assassin. If they had not, and had properly investigated the murder the truth would have become known decades ago. The main stream Press is still helping to cover-up this murder as they continue to produce "fake news" of a political nature, recently most strikingly against President Donald J. Trump.

The United States House of Representatives Select Committee on Assassinations (HSCA) concluded that it was probable that four shots were fired; the fourth shot came from a second assassin located on the Grassy Knoll. Conspiracy! No further governmental action was contemplated; which is a clear indication that there were no government agencies willing to find the truth or publish the truth behind Kennedy's murder.

DATA POINT (COVER-UP): In 1972 it was discovered that someone had broken into the National Archives closed security area and removed President Kennedy's brain and the full set of microscopic tissue sample slides that could have been used to determine not only the chemical signature of the bullet, but the actual direction of the bullet. The cover-up continues.

PHYSICAL EVIDENCE OF HEAD-WOUND IMPACT DIRECTION

o As stated above motor officer Billy Hargess riding to the left rear of the presidential vehicle, the closest officer to the President, was splattered with blood and brain tissue.

o *Associated Press* photographer James William "Ike" Altgens's testified that "the spray of brain and other matter was to the left and in front of Mrs. Kennedy – rather than to the right." He later recalled, "...that pieces of flesh, blood and bones appeared to fly from the right side of the President's head and pass in front of Mrs. Kennedy to the left of the Presidential limousine."

o The FBI description of the Orville Nix (1911-1972) film reported, "The President's head snaps to the left."

o U.S. Senate Investigator Harold Weisberg reported, “The Nix film here is quite consistent with Zapruder’s which taken from the opposite side, shows the snap to be both backwards and then to the left.”

o Weisberg reported on the resulting blood, brain and skull matter splatter due to the fatal gunshot wound to the President’s head. “William Allen Harper, a student at Texas Christian University... was taking pictures 29 hours after the assassination, in Dealey Plaza, **‘just south of the spot where President Kennedy was assassinated.’** He found **‘a piece of human skull.’** The FBI report located this spot at **‘approximately 25 feet south’** of where the President was at the moment of the fatal shot. Harper took this ‘piece of human skull’ to his uncle, a doctor, who, with Dr. C. E. Kerns (A. B. Cairns), pathologist at Methodist Hospital, identified it. Twelve pictures were taken. They were suppressed.” “That there is no doubt of the origin of this ‘piece of human skull’ is established by the disposition made of it by the FBI laboratory. It was ‘delivered to Admiral George Burkley, Physician to the President at the White House.’” “How could an explosion out of only the right side of the up-right President’s head have thrown a piece of it 25 feet in the wrong direction?”

o Weisberg further reported, “Constable Seymour Weitzman immediately found **a piece of the President’s skull a foot or less from the south curb of Elm Street**, where it could not have wound up without assistance were the official story true [that Kennedy was shot from the rear].”

All of this physical and photographic evidence is consistent with the fatal shot coming from the front right, and not from behind. None of this evidence was included in the Warren Report. It was suppressed.

The fatal shot from three separate camera angles.

Finally, it is recalled that after the fatal head shot Mrs. Kennedy is seen climbing out of her seat to retrieve a piece of her husband’s skull located to the left rear of their seats!

U.S. Senate Investigator Harold Weisberg reported on the reason why Dr. Burkley was not called to testify. “Perhaps the best explanation of the omission of George G. Burkley as a witness [in the Warren Commission] is that he is the one medical man who was in the motorcade when the crime was committed; was in the plane on the way back; was in the Navy autopsy room, and was the recipient of all the official evidence. It is to [vice] Admiral George G. Burkley that all that is missing [in evidence] was delivered, all that was withheld from the Warren Commission was funneled.”

Conclusions:

1. *All forms of evidence conclusively prove that the fatal head shot to the President was fired from the right front of the vehicle and could not have come from the rear of the vehicle.*
2. *There is in fact no scientific evidence to indicate that the head shot could have been fired from behind - none.*
3. *The Warren Commission produced intentionally incorrect information and presented photographs out of sequence in order to produce a fraudulent report to the American people.*

"My god, the whole right side of his head is shot off. We've nothing to work with."
Dr. William Kemp Clark

[END PART 12]

R. Michael Gordon, 2021

[Next week: Part 13: The magic bullet - the Zapruder film.]
